

BRAEDEN KEENA

Self-Taught Builder · Full-Stack Web & Automation · Operations Leadership

Overland Park, KS 66213 · Braeden@thekeenas.com · (303) 507-8626 · nacup.us · findstorage.netlify.app

Self-taught developer who ships real products people actually use — three deployed, live web applications in the past 14 months, built end to end: data pipelines, scraping and API reverse-engineering, front-end, SEO, and daily automation. Backed by a decade of hands-on operations leadership managing teams of up to 100 people. I learn whatever a problem requires, then build the thing.

SHIPPED PRODUCTS (SOLO-BUILT, END TO END)

WiFi CSI RF-Fingerprinting Sensor Array — ESP32 + Python DSP *2026 · Deployed / Live · Firmware / DSP*

- Deployed and running 24/7 as the live, in-production home-security system for my own apartment — not a benchtop experiment. Built by applying the scientific method to a hard RF problem: hypothesized that a radio's crystal-oscillator imperfections form a hardware fingerprint that survives MAC-address randomization, then proved through controlled experiments that device identity can be recovered from clock behavior rather than spoofable network identifiers.
- Built the full stack solo — ESP32 firmware (C / ESP-IDF) plus a Python DSP pipeline (RANSAC phase-slope fits → 1D Kalman drift tracking → Mahalanobis discrimination against per-source Gaussian models) — reaching 11–15 σ cross-manufacturer device separation and 99.6% holdout accuracy over a 2.8-million-frame dataset.
- Diagnosed thermal oscillator drift as the accuracy-limiting problem and engineered a novel reference-beacon drift-correction technique that cancels receiver-side drift and more than doubled device separation — turning an unstable measurement into a reliable fingerprint.

nacup.us — Live World Cup 2026 Fan Hub

2026 · Founder / Developer

- Designed, built, and deployed a full-stack production site in 48 hours; reached first-page organic search traffic within 24 hours of launch with 700+ visitors on day one during a live global event.
- Multi-source data pipeline (Google Places API, RSS, news scraping, live scores REST API) with dedupe/merge logic, trust-tier scoring, and freshness decay ranking across 38 host-city feeds.
- Programmatically generated 80+ static SEO pages with JSON-LD structured data, sitemap, and Search Console integration; live-score polling with caching and fallback states.
- Stack: Python, vanilla JavaScript, Leaflet.js, Cloudflare Pages, GitHub CI/CD.

findstorage.netlify.app — Nationwide Self-Storage Directory

2025 · Founder / Developer

- Reverse-engineered undocumented APIs and chained three scrapers to index ~3,590 storage facilities nationwide with full unit-level pricing and promotional discount math.
- Interactive map front end (Leaflet.js + MarkerCluster) with smart location/keyword search, distance search, and tap-to-call mobile UX.
- Fully automated refresh pipeline via scheduled tasks — the dataset updates itself daily with zero manual work.

Chrostory — Full-Stack Web App

2025 · Founder (launched & sunset)

- Took an original product from concept to public beta solo and validated it with 40+ real users; made the call to sunset it and applied the lessons — faster shipping, SEO-first architecture, automated data — directly to the two larger launches that followed.

Discord Community Platform & Bots

2019 – Present

- Grew a community from zero to 3,500+ active members; built custom Python bots with NLP features to automate moderation and support e-commerce operations.

TECHNICAL SKILLS

- **Languages:** Python (scraping, data pipelines, automation), JavaScript, SQL, HTML/CSS
- **Web & Data:** REST APIs, API reverse-engineering, static site generation, technical SEO, Leaflet.js mapping, JSON data architecture
- **DevOps:** Git/GitHub, CI/CD (Cloudflare Pages, Netlify), Windows task automation, scheduled data refresh systems

- **Hardware/IoT:** ESP32 firmware (C / ESP-IDF), ESP-NOW & BLE, I2C peripherals, sensor networks, 3D printing & CAD (OpenSCAD)

OPERATIONS & LEADERSHIP EXPERIENCE

10+ years of front-line operations and team leadership — including owning and operating my own business — managing teams of up to 100 people, high-volume service environments, vendor coordination, and hands-on troubleshooting of everything from kitchens to building systems.

3rd Party Property Manager — Public Storage, Kansas City, KS

12/2025 – Present

- Opened and launched a new third-party-owned self-storage facility that rented above projected lease-up expectations from day one.
- Served as primary liaison coordinating communications across building crews and contractors, Public Storage corporate, and the third-party property owners — keeping construction, handoff, and daily operations aligned.

Crossing Guard Operations Supervisor — All City Management Services (ACMS)

2023 – 2025

- Supervised a workforce of school crossing guards across multiple sites — hiring, scheduling, daily coverage, and safety compliance — keeping every post staffed and students crossing safely.

Server — Tabard's Kitchen

2019 – 2020

- Served guests in a high-volume restaurant: took and delivered orders, processed payments, and maintained service and food-safety standards through busy shifts.

Owner / Operator — Honey Lake Motocross Park, Milford, CA

2016 – 2018

- Owned and operated a ~500-acre motocross park end to end: brought a dormant operation back online, ran track upkeep and rider safety, event days, staffing, pricing, and marketing with full P&L responsibility, then exited by selling my ownership shares.

Line Cook — Twin Peaks

2013 – 2014

- Cooked on a high-volume line: prepared made-to-order dishes to spec, held station and food-safety standards, and kept pace through peak service.

Server — Logan's Roadhouse

2011 – 2012

- Served guests in a busy full-service restaurant: order accuracy, timing, payments, and consistent service during high-volume shifts.

EDUCATION

GED — State of Kansas, 2014. Everything since: self-taught, project-driven, and shipped to production.
